

Green Zone to Protect IT Assets

HDF : An Innovative Non-Signature Based Anti-Malware Security Technology

HDF is an innovative patent-protected solution to prevent virus, spyware and malicious software (malware) infection without virus database file updates. The HDF concept is simple: if virus and malware are vigorously stopped from entering a computer, they cannot spread and infect the computer. HDF integrates fully into the Microsoft® operating system and is totally transparent to applications and users. No user interaction is needed.

All programs e.g. business applications, viruses, trojan and spyware are executable code. Malware are programs we do not want to run on our systems. HDF blocks unwanted software from storing to the computer by robust technical means, that proactively protects computer from malware infection.

Industry Landscape

After-the-fact solution = effective only with updated signatures

Antivirus Technology
(McAfee, Symantec,
TrendMicro...)
→ *Signature based*

Anti Spyware Technology
(Microsoft, Spybot, ...)
→ *Signature based*

HDF is preventive protection
→ *Non-signature based*
→ *Scope = filesystem*

Personal Firewall
(ZoneAlarm, Microsoft, ...)
→ *Scope = Network*

Proactive solution = effective always
